

Flypaper roll^{10S}

Flypaper roll for attraction and control on flying insects in indoor areas such as stables.

The Flypaper roll 10S contains patterns and colors which attract flies.

A very strong glue board catches the flies and will stick on the paper roll.

Flypaper roll^{10S}

For use in indoor applications such as stables, agricultural areas and areas with a high flying insect population.

The Insective Flypaper roll 10S contains a pattern, which is optimised to attract flying insects fast.

The roll contains 10m of flypaper.

The special non-dangerous glue is developed to retain the insects on the board.

Easy to service, easy to dispose off.

Start using the Flypaper roll 10S:

1. Remove the product package from the roll. Do not remove the cord.
2. Attach leading end of roll, with cord on a hook or angled nail.
3. Pull the roll down by holding onto cord. Glue surface facing down.
4. Hang cord on a hook - pull out as much you need on the place.
5. For best results, unroll the full trap to the ground (if possible).

Specifications

Name	: Flypaper roll 10S (Stable roll)	Operational time	: Commonly 2 months
Description	: Glue roll for control of flying insects	Storage time	: Max. 48 months
Length	: 10 meters	Storage temperature	: Max. 25 degrees Celsius
Width	: 0,25 meters	Attractant	: None
For controlling	: Flying insects in stables/several areas	Weight per roll	: 0,32 kg
Color board	: White	Disposal instructions	: None specific
Water resistant	: Humidity resistant paper execution	Environmental aspects	: None
Counting grid	: No	Regulatory aspects	: None
