

Flyzone XL

The safe, non-toxic fly trap

For Domestic and Agricultural use • No more pesky flies

Flyzone XL

Flyzone, the disposable and effective outdoor fly-trap

The Flyzone catches common nuisance or filth flies -- hundreds of the most prevalent species including house flies, false stable flies, blow flies, blue and green bottle flies, flesh flies, face flies and many others.

Inside the Flyzone is a bait that flies find irresistible. This attractant is comprised of food ingredients and other food flavorings generally recognized as safe. The attractant dissolves and is activated, when water is added to the bag. Lured by the scent, flies enter the trap through the yellow top cap and drown in the water.

Unique features and benefits:

- The powder attractant is contained within the trap itself
- The attractant dissolves and activates quickly when water is added to the bag
- The Flyzone design eliminates touching the bait or the flies
- Fully disposable as non-chemical waste
- Catches up to 10,000 flies or more
- No resistance built up possible

How does it work?

Once flies enter the trap, the flies cannot escape and drown in the water, which was added to the bag.

Where to use?

The Flyzone is intended for outdoor use only. It will help control & diminish the fly population outside before it ever becomes a nuisance inside. We recommend hanging it around 5 meters away from any outdoor living spaces, such as terraces and children play areas.

Recommended locations for the trap include:

- In a stable - with good air ventilation
- Around poultry, pigs, sheep, dairy and beef cattle areas
- Near rubbish bins or skips
- Near a compost pile or manure heap
- Near a campsite

When should the Flyzone be used?

The Flyzone can be used whenever hot, humid conditions or the presence of animals or garbage cause an outdoor fly problem. Typically this is from March to October.
